

## Smoke Alarm Replacement Program

The National Fire Protection Association (NFPA) recommends replacing hardwired smoke alarms after 10 years from the date of manufacture. The radioactive element in the ionization chamber of the smoke alarm becomes less effective over time. All homes in SCLH have hardwired smoke alarms and Neighbors InDeed offers a smoke alarm replacement program.\* All the smoke alarms in your home must be replaced at the same time.

**\*Excludes alarms installed on 12' or higher ceilings.**

### Suggested replacement unit:

First Alert Model # BRK 9120B with standard 9-Volt battery.

### Handy Helper Tip When Installing Replacement Alarms:

Avoid changing batteries every year. Purchase a 9-Volt Lithium battery to install with each new smoke alarm. The Lithium batteries have a life span similar to the smoke alarms. Or, purchase the more costly BRK 9120LBL which comes with a Lithium battery.

NID recommends the use of Lithium batteries only on new installations or when replacing existing smoke alarms so that the battery and smoke alarm last the same amount of time.

First Alert BRK Models are available locally at Lowe's.
